Summary

Full-stack software engineer with 2 years of experience building mobile and web products, most recently at Avida, a US-based fitness-coaching platform, where I was promoted from intern to Software Engineer in 6 months. I take features from design to production (architecture, React Native for iOS and Android, React, Node.js/Firebase, testing and release) and pick up new technologies quickly. Looking for a Software Engineer role building mobile or full-stack products.

Technical Skills

Programming Languages: TypeScript, JavaScript, Dart, Java, Python, SQL, HTML, CSS

Mobile and Web: React Native (iOS and Android), Expo, EAS Build, React, Material-UI, Flutter, Tailwind CSS

Backend and Cloud: Node.js, Firebase (Cloud Functions, Firestore, Realtime Database, Auth, Storage, Security Rules), REST APIs, Webhooks, Spring Boot, Google Cloud

Data: Firestore, PostgreSQL, MySQL, SQLite, MongoDB, BigQuery

AI: LLM prompt engineering, AI agent integrations, embeddings, AI-assisted development and design (Claude)

Tools and Practices: Git, GitHub Actions (CI/CD), PostHog (feature flags, analytics), Sentry, Linear, Jira, Notion, Figma, system design, code review, E2E testing (Autosana), Agile

Experience

Avida (System2) — avida.life Nov 2024 – Oct 2026
Fitness-coaching platform: mobile app, coach web dashboard and Firebase backend *San Francisco, US (Remote)*
Software Engineer *May 2025 – Oct 2026*

- Owned 10+ product features end to end across a React Native (Expo) mobile app for iOS and Android, a React web dashboard and a Firebase/Node.js backend: wrote the solution design and architecture docs, designed the UI with Claude, built every layer, validated it and shipped it through phased, feature-flagged releases.
- Architected and built the in-app Community platform over four versions: posts with images, video, voice and in-app recording, threaded comments with media, reactions, pinned posts, and product-scoped communities that stayed backward compatible with older app versions.
- Delivered an Inside Sales dashboard with KPI cards (wins, claims, agent online time), follow-up and contract pipelines, and real-time agent presence on Firebase Realtime Database synced to Firestore; then improved its load performance.
- Integrated an AI-driven sales lead (SDR) pipeline: webhooks and REST APIs for an AI agent, automatic lead flagging and escalation, voice-call integration, and LLM prompt tuning for lead disqualification.
- Shipped nutrition barcode scanning after evaluating food-data vendors; built a native iOS AVFoundation scanner and an Open Food Facts import ranked alongside USDA data.
- Built Apple Health and Android Health Connect workout data views for clients and coaches, including privacy-policy and Google Play compliance and health-data deletion on account removal.
- Built and tested platform-specific iOS and Android features and fixes: native camera and barcode scanning, video recording, compression and playback, health data sync, permissions, pickers and layout issues, verified on both platforms before each release.
- Migrated 20+ production Cloud Functions from deprecated Node.js 16/20 runtimes to Node.js 22/24 and removed a legacy third-party integration with no downtime.
- Served as on-call support engineer: resolved 180+ customer and coach support tickets (billing, Stripe subscriptions, access, data issues), escalated with reproductions, and turned recurring problems into shipped fixes.
- Merged 420+ pull requests across mobile, web and backend, reviewed teammates' code, and wrote safe, dry-run-verified data migration scripts for production Firestore data and end-to-end test plans for major releases.

Intern Software Engineer *Nov 2024 – May 2025*

- Rebuilt the coaches' client-management view in React and Material-UI (profile panels, editable profile with validation, consolidated tabs) and added a To-Do system with drag-and-drop ordering.
- Built lead-contract tooling: contract links sent by SMS, iMessage and email with editable templates, dynamic contract-terms preview, and coach fee settings, backed by Cloud Functions and Firestore rules.
- Delivered tag-based custom check-in templates across web, mobile and backfill scripts; promoted to Software Engineer after 6 months.

IntendAble Jan 2024 – Nov 2024
Software Engineer (Mobile) *Colombo, Sri Lanka*

- Built cross-platform mobile apps in Flutter (GetX) for several client projects at an organization focused on community-driven projects, open-source research and public datasets.
- Integrated Google Maps API, Firebase and Spring Boot back ends with PostgreSQL and MySQL.

Education

University of Colombo School of Computing (UCSC) May 2021 – 2025
Bachelor of Science in Computer Science *Colombo, Sri Lanka*

Projects

EchoLynk — Communication app for Deaf and Mute users Apr 2024 – 2025

- Built an accessible communication app with sign-language detection, contextual text suggestions and visual cues. Android (Java), SQLite, Generative AI, React, Spring Boot.

Online School — Cross-platform mobile app Jul 2023 – Sep 2023

- Built course browsing, scheduled live classes, payment-gateway checkout and dynamic class capacity. Flutter, GetX, Firebase, EmailJS.

Amoral Clothing — E-commerce and workforce management system Jun 2023 – Apr 2024

- Built online ordering, delivery, stock and employee management, a T-shirt designer and reporting. JavaScript, HTML, CSS, MVC.

Positions of Responsibility

- President, IEEE Computer Society Student Branch Chapter of UCSC 2024 – 2025
- Vice President, IEEE Computer Society Student Branch Chapter of UCSC 2023 – 2024
- Coordinator, CodeGen — UCSC Career Fair 2024
- Program Team Coordinator, IntelliHack 3.0 — IEEE CS SBC of UCSC 2023
- Volunteer, GDG Cloud Connect — IEEE CS SBC of UCSC 2023

Achievements

- Finalist, MadHack — mobile app hackathon, IEEE SB of UCSC 2024
- AI-Driven Sri Lanka — generative AI hackathon, IEEE SB of IIT 2023

Certifications

- Foundations of Flutter Development — Google (Coursera)
- AWS Educate Introduction to Cloud — Amazon Web Services
